

Redefining Modern Engineering Through AI Innovation

Ascension is an AI-first engineering company, redefining how the world builds, operates, and evolves software at an enterprise scale. The company's purpose is to prove what AI can deliver when it is embedded into the core of product engineering and enterprise operations. It is reshaping the future of engineering for hundreds of global enterprises by uniting AI precision with human ingenuity.

Ascension maintains a frontier approach to AI. This is reflected in AAVA, an agentic AI platform that transforms the entire lifecycle of software creation. AAVA fuses human expertise with AI-driven design, coding, testing, and data workflows, ensuring greater velocity, transparency, and governance. Human plus agent teams built on AAVA deliver software at half the time and cost, with radical visibility into performance and value. Ascension engineered AAVA to build smarter for clients, later using it to re-engineer how it runs as a business.

The company's commitment to reinvention extends across every function through NAVI. This is a suite of Copilot-powered AI agents that unify enterprise data, automate operations, and deliver real-time insights. Hosted on Microsoft Teams, NAVI streamlines reporting, reconciliation, onboarding, and decisioning across sales, finance, HR, and delivery. By orchestrating data from core enterprise systems across the business, NAVI elevates enterprise intelligence and accelerates outcomes. Together, AAVA and NAVI form the dual core of Ascension's AI-first operating model. The results of Ascension's approach are significant. Software product engineering is now 50 percent faster, with efficiency rising by an equal 50 percent, both internally and for clients. Operational workflows across sales, HR, and finance have been redesigned for speed and accuracy through NAVI's intelligent automation. Marketing impact has doubled, powered by AI driven optimization that improves precision and return on investment. These outcomes signal a fundamental shift in how engineering organizations operate, innovate, and deliver value.

Ascension's AI-driven transformation reflects a bold commitment to reshaping how modern engineering is imagined and delivered. Beyond the facts and figures, the real impact lies in how human expertise and intelligent agents now operate as one unified system. In doing so, Ascension has empowered teams to move faster, build smarter, and deliver impact at a scale previously out of reach. ■

Karthik Krishnamurthy

Founder and CEO,
Ascension

AI isn't an experiment at Ascension. It's how we serve clients and how we run our business. AAVA™ is at the center of it all, it proves software helps build better software: greater velocity, quality, and productivity at lower risk. We're using AAVA™ agents to build our own platforms like NAVI to power every function of our business. The frontier of engineering and operations is powered by humans and intelligent agents working as one."
